How may we help you?

3 steps to virtualize your touristic inventory

3 OTDS Inspector for ongoing QA

2 OTDS Caster and OTDS Templates

1 OTDS Bootcamp

How our services come into play

The Task

You have unique touristic content in your inventory
 You want to sell more to various B2B partners ...
 ... while preserving flexibility and uniqueness

The usual way

You could invent a data exchange format
 You could use flat data files (XML and text files)
 You could use proprietary rule-based data formats
 There are huge drawbacks...

OTDS
 One File to Rule Them All

Fortunately there is another way

Emerging open standard OTDS "Made in Germany"

OTDS is a language rather than a format

OTDS gives you the means to

- describe the content
- provide the availabilities
- define the rules
 - for occupancies
 - for prices
 - for valid content combinations
- construct composed products out of defined components

It allows fine-grained updates on component level

It defines a precise, unambiguous and completely process the language

Everything in one zip file

Everything without License costs or royalties
